

**Other Protistor® Fuses  
Ferrule Fuses  
22x58 gRC (URD) - 600 V to 690 VAC**

EXTREMELY BREAKING CAPACITY RATING FUSES: PROTECTION OF SEMICONDUCTORS  
IN COMPLIANCE WITH IEC STANDARD 60269.1 AND 4

600 - 690 V VOLTAGE RATING (CURRENT RATING 12 TO 135 A)  
AS PER IEC 33

gR CLASS (CURRENT RATING 12 TO 100 A) ACCORDING TO VDE 636-23

- CLEARING ALL OVERLOADS
- IMPROVED SAFETY AND PROTECTION
- ENABLING SELECTIVE COORDINATION AMONG ALL DISTRIBUTION CIRCUIT FUSES

aR CLASS (CURRENT RATING 125 AND 135 A) AS PER VDE 636-23 AND IEC 60269.4

TWO MODELS COMPLYING WITH NF C 63210 AND 63211  
WITH OR WITHOUT TRIP-INDICATOR

gRC FUSES ARE 700VAC-DC UL RECOGNIZED

### Main Characteristics

Voltage rating $U_N$ (V)	Class	Current rating $I_N$ (A)	Pre-arcing $I^2t$ @ 1 ms $I^2tp$ (A <sup>2</sup> s)	Total clearing $I^2t$ @ $U_N$ $I^2tt$ (A <sup>2</sup> s)	Watts loss $0.8 I_N$	$I_N$	Tested Breaking capacity	Estimated Breaking capacity
690	gRC	20	17	125	4.0	6.5	100k A @ 690 V	300k A @ 690 V
		25	39	280	4.5	7.5		
		32	72	490	5.0	9.0		
		40	118	785	5.5	10		
		50	242	1390	7.0	11.5		
		63	430	2460	8.0	13.5		
		80	970	5565	9.0	15.5		
		100	2080	11950	10	17		
600	URD	125	2900	14000	14	22	100k A @ 600 V	300k A @ 600 V
		135	3360	17700	15	25		

Minimum operating voltage for the trip-indicator: 20 V

See Fuse Blocks and Fuse Holders section

**Ferrule Fuses**  
**22x58 gRC (URD) - 600 V to 690 VAC**

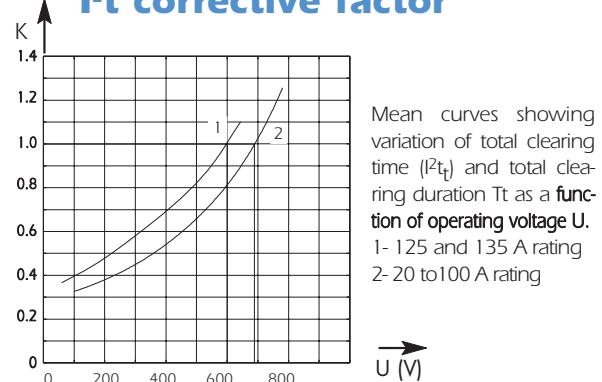

### Total clearing $I^2t$

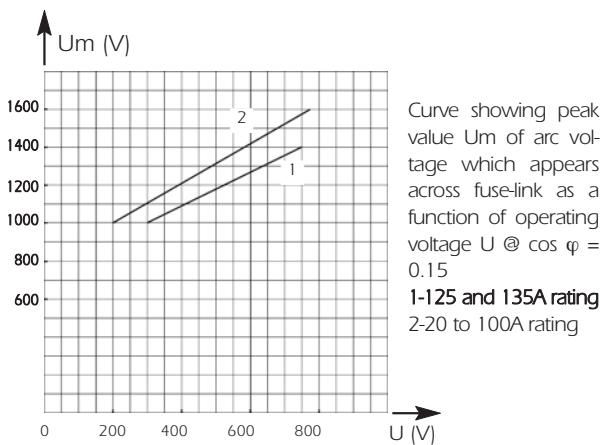

Above: Horizontal curves show, for each rated current, maximum values of total clearing  $I^2t$  as a function of prospective current  $I_p$  @ 690 V.  $\cos\varphi = 0.15$   
(125-135 A @ 600 V  $\cos\varphi = 0.15$ )

Oblique lines indicate total clearing duration  $T_t$  with associated pre-arching duration in brackets.

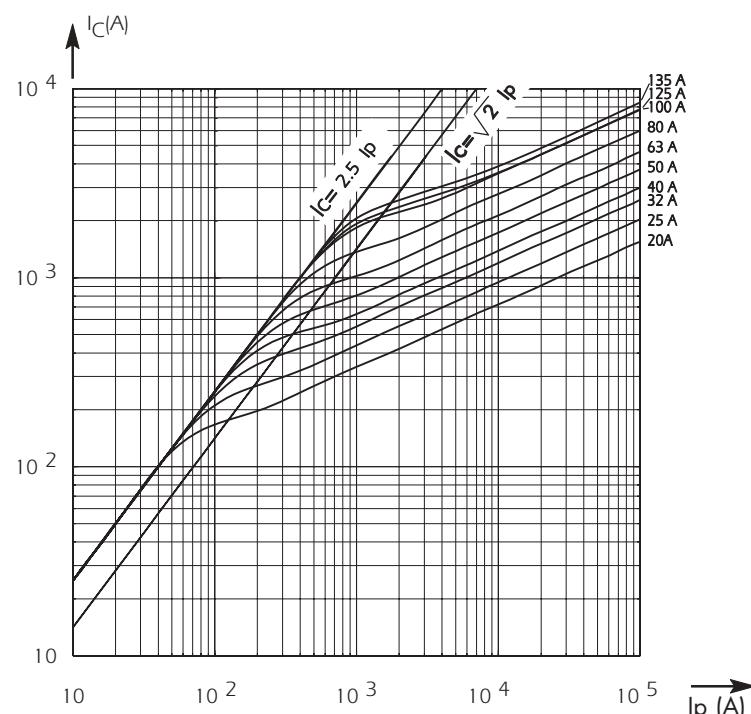

### $I^2t$ corrective factor

### Peak arc voltage

### Current limitation curves

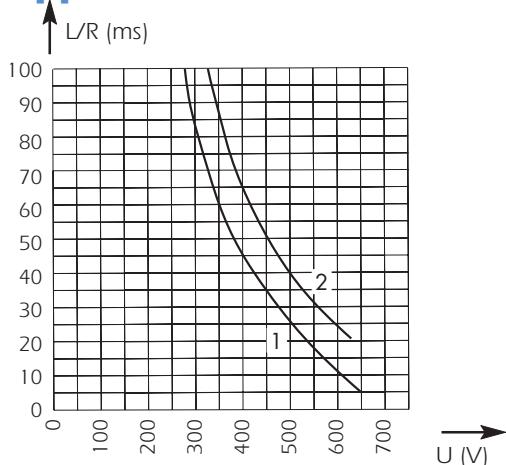

Left: Curves show value of peak let-through current  $I_C$  as a function of the available fault current  $I_p$ .

### 22x58 gRC (URD) - 600 V to 690 VAC

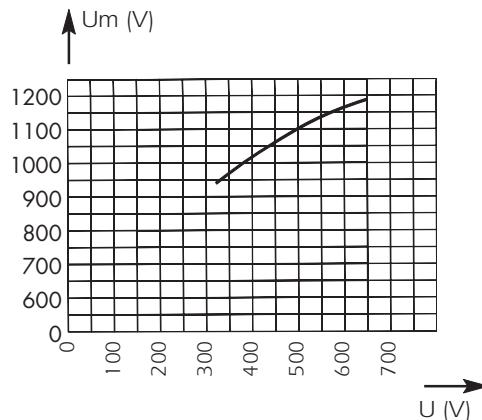

#### DC Application data

Ces courbes indiquent la constante de temps  $L/R$  maximale admissible en fonction de la tension d'utilisation

Courbe 1 :  $I_p \geq 1,6 I_N$  pour fusibles gRC uniquement (calibres de 12 à 100 A)

Courbe 2 :  $I_p \geq 2,5 I_N$  pour fusibles gRC et URD

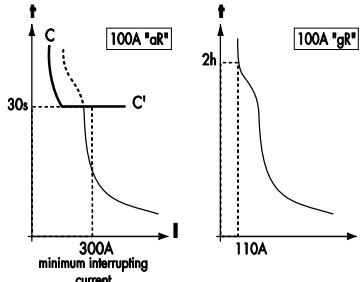

Above: Curve indicates peak arc voltage  $U_m$  which may appear across fuse terminals at working voltage  $U$ .

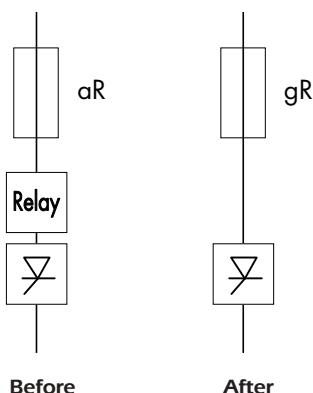

#### NEW gR-CLASS

##### OPTIMAL PROTECTION OF POWER EQUIPMENT

Thanks to recent technological developments, Ferraz Shawmut today markets gR-class PROTISTOR® fuses capable of clearing all types of overloads, from low multiples of current ratings up to very high short-circuit currents. Enhanced performance enables these fuses to provide solutions to many previously unsolved problems in power electronics: protection of cables without the use of additional components, protection of equipment from fire hazards, selective coordination of different fuses within a single power distribution installation...

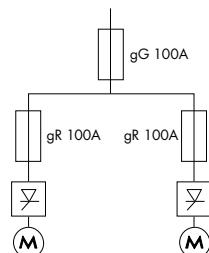

Example:  
100A aR vs. 100A gR

##### SELECTIVE COORDINATION

gR-class semiconductor fuses can be utilized in association with gI and gG-class low voltage power distribution fuses of the same current rating, installed upstream. In a "selectively coordinated" distribution installation, melting is limited to the fuse associated with the faulted circuit, while upstream fuses remain intact. This prevents unnecessary down-time due to power blackouts in non-faulted branches.

Example of  
selective  
coordination

##### aR-CLASS vs. gR-CLASS

aR-class fuses feature a high minimum interrupting current as compared with their current rating. The primary time-current characteristic of aR-class fuses is the CC' curve, above which another protection device must be associated. The gR-class fuse represents considerably improved performance in semiconductor protection

##### FERRAZ SHAWMUT EXPERTISE

gR-class fuses should be used in the design of low voltage equipment and in the protection of power electronics equipment. Designers can often substitute a gR-class fuse for an aR-class fuse (10x38, 14x51, 22x58, PSC 000 and 17x49 DIN80 or BS 88-4) but the reverse is not true: an aR fuse can never replace a gR fuse. Start protecting your new equipment with gR-class fuses today. The application of gR class fuses, with current ratings less than 100 Amps, offers enhanced protection, safety and reliability, along with reduced risk of replacement errors and assembly costs.
